A factor of δt should be dropped from the first two equations in the right column of p. 3821, from Eq. (17), and from Eqs. (C1)–(C3).

A factor of δt^2 should be dropped from the equation right above Eq. (9), from Eq. (10), and from Eq. (B2).

Similarly, expressions in discussions and intermediate steps should have δt dropped from statistics having the dimension squared wavelet coefficient, and should have δt^2 dropped from those having the dimension of wavelet coefficient to the fourth power.

Patterns in Fig. 1 are correct, but both $|C_{xy}(a, b)|^2$ and the associated 5 % significance level have been mistakenly multiplied by δt^2.
