% geomagnetic data, & near-Earth interplanetary and (signed) open solar flux (OSF) reconstructions
% M.Lockwood December 2013. (for queries please contact: m.lockwood@reading.ac.uk)
% full explanations are in a series of 4 papers in Annales Geophysicae. Please cite relevant ones if data are used
%
% #1: Lockwood et al. (2013a) Reconstruction of geomagnetic activity and near-Earth interplanetary conditions over
% the past 167 yr - Part 1: A new geomagnetic data composite
% Annales Geophysicae, 31, pp. 1957-1977, doi:10.5194/angeo-31-1957-2013
% open access, available from: http://www.ann-geophys.net/31/1957/2013/angeo-31-1957-2013.html
%
% #2: Lockwood et al. (2013b) ..." - Part 2: A new reconstruction of the interplanetary magnetic field
% Annales Geophysicae, 31, pp. 1979-1992, doi:10.5194/angeo-31-1979-2013
% open access, available from: http://www.ann-geophys.net/31/1979/2013/angeo-31-1979-2013.html
%
% #3: Lockwood et al. (2014a) ..." - Part 3: Improved representation of solar cycle 11
% Annales Geophysicae, in press (will be open access when published)
%
% #4: Lockwood et al. (2014b) ..." - Part 4: near-Earth solar wind speed, IMF and open solar flux
% Annales Geophysicae, in press (will be open access when published)
%
% Vg1, Bg1 and OSFg1 are the near Earth solar wind speed, IMF and OSF derived using the aaC (corrected aa) and IDV(1d) geomagnetic indices
% OSFg2 is derived using the method of Lockwood et al. (1999) from aaC index and the recurrence index (RI) derived from aaC
%
% Vo, Bo and OSFo are the near Earth solar wind speed, IMF and signed OSF from near-Earth satellite observations.
%
% Bopt is the optimum estimate of the IMF using N pairings and a Monte-Carlo analysis of 10000 fits
% Bmax is the upper limit of IMF at the 2-sigma level from N pairings and a Monte-Carlo analysis of 10000 fits
% Bmin is the lower limit of IMF at the 2-sigma level from N pairings and a Monte-Carlo analysis of 10000 fits
%
% Vopt is the otimum value of the SW speed using N pairings and a Monte-Carlo analysis of 10000 fits
% Vmax is the upper limit of SW speed at the 2-sigma level from N pairings and a Monte-Carlo analysis of 10000 fits
% Vmin is the lower limit of SW speed at the 2-sigma level from N pairings and a Monte-Carlo analysis of 10000 fits
%
% OSFOpt is the otimum estimate of the open solar flux using all 4 pairings and a Monte-Carlo analysis of 10000 fits
% OSFmax is the upper limit of open solar flux at the 2-sigma level from N pairings and a Monte-Carlo analysis of 10000 fits
% OSFmin is the lower limit of open solar flux at the 2-sigma level from N pairings and a Monte-Carlo analysis of 10000 fits
%
% N is the number of pairing used (see Paper 4 for details)
% N = 4 is aaC and IDV(1d), aaC and IDV, IHV and IDV(1d), and IHV and IDV
% N = 2 is aaC and IDV(1d), aaC and IDV
% N = 1 is aaC and IDV(1d)
%
% Uncertainty ranges Bmin-Bmax and Vmin-Vmax allow for regression fit error, the IMF orientation factor
% IMF and solar wind measurement errors in in-situ data, geomagnetic composite join errors,
% and magnetometer calibration errors
%
% The signed open solar flux estimates OSFo, OSFg1 and OSFg2 all make allowance for the "flux excess" effect of solar
% wind longitudinal structure and Alfvén waves between the coronal source surface and the near-Earth observation point.
% Discussion of the need for this and of the relevant literature
% is given in the on-line review:
%
