Fig 1 and Fig 2 were removed from the paper as you suggest. You suggest some references, we have added it to our paper. You have also mentioned about There is no attempt to solve solar, magnetic and earthquake effect. We would like to analyze as statistical and we think that we are successful on this stage. We don't want to show anomalies like only caused by earthquake like other wrong papers. It will be not convenient for us. The other thing is that we don't need to show Ionolab method is better than GIM-TEC models. It is not our subject. We only discuss that there is an anomaly or not before during and after the earthquake using two different models. We

C1

also believed that we explained detail results in conclusion
