Received and published: 10 July 2018

Referee report on the MS “The ionospheric response over the UK to major bombing raids during World War II” by C. J. Scott and P. Major

The subject of the present MS is more or less identical to that provided by Pokhotelov O. A., V. A. Liperovskii, Yu. P. Fomichov, L. N. Roubtsov, O. A. Alimov, Z. S. Sharadze and R. K. Liperovskaya (1991), Ionosphere modifications during military actions in the Persian Gulf war, Dokl. AN SSSR, v. 321, No 6, 1168-1172 published nearly two decades ago. I think that the relevant reference to this MS should be added by the authors. The authors provided quite complex analysis of the ionospheric effects caused by bombing raids during World War II. The results of this study may be published In
