Dear Kui Jiang,

In our work there are references to the works, and not only in the introduction, in which the features of the turbulent processes in the tail of the Earth’s magnetosphere and their role in the physical processes that occur there are considered:

Lui, A. T. Y. and Najmi, A.-H.: Time-frequency decomposition of signals in a current disruption event, *Geophysical Research Letters*, 24, 3157–3160, <https://doi.org/10.1029/97gl03229>, 1997.

Consolini, G. and Lui, A. T. Y.: Sign-singularity analysis of current disruption, *Geophysical Research Letters*, 26, 1673–1676, <https://doi.org/10.1029/1999gl900355>, 1999.

M., and Yumoto, K.: A tailward moving current sheet normal magnetic field front followed by an earthward moving dipolarization front, *Journal of Geophysical Research: Space Physics*, 119, 5316–5327, <https://doi.org/10.1002/2013ja019657>, 2014.

Kan, J. R.: A globally integrated substorm model: Tail reconnection and magnetosphere-ionosphere coupling, *Journal of Geophysical Research: Space Physics*, 103, 11787–11795, <https://doi.org/10.1029/98ja00361>, 1998.

The analysis of the models is done because the analyzed events of the magnetic field dipolarization satisfy one of the models.

We understood that the symbol \div in LaTeX, is shown incorrectly for you. For us it's shown correctly. To avoid this inconsistency, we will replace it with a "from ... to ...". Thank you.

Best regards, Andrew.
