Interactive comment on "Sporadic Aurora near Geomagnetic Equator: In the Philippines, on 27 October 1856" by Hisashi Hayakawa et al.

Anonymous Referee #2

The manuscript "Sporadic Aurora near Geomagnetic Equator: In the Philippines, on 27 October 1856" presents a very interesting observation, as stated by Reviewer 1, and linked to an attractive and important topic in geosciences. The paper is well written and the description of the phenomenon is very clear. So, I think it should be published in this journal. In addition, although an isolated phenomenon, it may be a useful result for studies of long-term variations of geomagnetic activity and Earth's magnetic field as well.
