

Interactive comment on “Overshoot dependence on the cross-shock potential” by Michael Gedalin et al.

Anonymous Referee #1

Received and published: 17 October 2019

I am sorry for this long delay which, as I realize, is due to the laziness of the other reviewer.

I nevertheless strongly suggest not to withdraw the paper. I hope the editor-in-charge will handle the paper as quickly as possible, either urging the other reviewer to submit a review almost immediately or stay with my review only.

I would like to stress that I am satisfied with this paper and would not see any serious reason for not accepting it.
