First of all, thank you for the comments and suggestions in order to improve our manuscript. We believe the main point you have risen is to compare data of meteor radars to GSWM-09 simulation. We want to inform you the results of GSWM-09 is available to us at present. We are working on it in order to start the comparison very soon. Because of this, we kindly request more time to prepare a new version of the manuscript including GSWM-09 simulations.

Thank you very much
