Received and published: 11 February 2020

We are writing to communicate our decision to withdraw this manuscript, “Inferring the source regions of pulsating auroras” (angeo-2019-162). We agree with many of the reviewers’ concerns, and especially want to get the points that we are trying to make in sections 2 and 3 correct. It is our intention to split this paper into two separate publications and resubmit, starting first with a paper based on an enhanced view of the section 2 and 3 material. We thank the reviewers for their work.

Sincerely,
Eric Grono and Eric Donovan
