

## ***Interactive comment on “Jets in the Magnetosheath: IMF Control of Where They Occur” by Laura Vuorinen et al.***

### **Anonymous Referee #1**

Received and published: 17 June 2019

The authors have addressed my remaining issue, and with the additional text they suggest (perhaps together with a comment along the lines of "This criterion prevents multiple consecutive peaks from being counted as individual jets.", as they include in the reply), I am now happy to recommend the paper for publication.
