

## ***Interactive comment on “Dust sputtering within the inner heliosphere” by Carsten Baumann et al.***

**Carsten Baumann**

carsten.baumann@dlr.de

Received and published: 18 June 2020

This comment is to report a typo within the supplemented material.

The supplemented material uploaded contains a typo within the sputtering yield the H ion for the silicate dust material (within *supplement\_material.pdf* and *AstronomicalSilicate.txt*):

Old version:

H,0.0059,0.0034,0.0030,0.0209,0.0109,0.0047,0.0040,0.0346,0.0103,0.004 9,**0.0391**,0.0305

Correct version:

H,0.0059,0.0034,0.0030,0.0209,0.0109,0.0047,0.0040,0.0346,0.0103,0.004 9,**0.0039**,0.0305

The corrected value does neither change the results of the manuscript nor the findings.

The figures of the manuscript do not change when using the corrected value. The original figures can still be used and the authors declare that no other changes has been made to manuscript. It was only barely visible during the production of the new Figure02 (requested from reviewer 2). The new Figure 2 has been made using the correct value.

To correct this typo, a new version of the supplemented material has been prepared which will be uploaded with the revised version of the manuscript.
