

Dear Theodore Giannaros.

We requested assistance from a native speaker Harding, Brian J. from University of California, Berkeley, United States (<https://www.scopus.com/authid/detail.uri?authorId=55577884500>, <https://orcid.org/0000-0002-1293-9379>). Here is Brian's answer –

"I didn't think the English was too bad. Just a few spots needed some attention. I think the editor and / or reviewer were being too strict. It's a nice study. I'm not aware of previous FPI Some of the changes seem very large. I agree with your conclusion that it's difficult to interpret green line observations from the ground, since you can never be sure if you are looking at actual wind / temperature changes, or if you are looking at airglow height changes. "

We have corrected the text of the manuscript taking into account the corrections of the Brian Harding.

We also contacted the AnGeo editorial support team and received an answer - "We will do a light copyediting during the production process. You do not need to send it to a copy editing service".
