Editor's Comment:

Dear Dr. Parihar et al.!

I am pleased to accept your manuscript for final publication. Thank you for revising the manuscript considering the suggestions from the reviewers and editor and congratulations for the research. I have one more suggestion. Even after re-processing the airlgow images, it was not easy for a reader to identify the wave structures in the supplementary video. May you, please, highlight all structures using arrows or lines to emphasize them in the movie? As suggestion, you can use the same pattern used in Figures 1, 2, 6 and 7.

Best regards,

Igo

Respected Sir,

Please accept our warm greetings. We consider ourselves to be very fortunate that you served as Editor to our manuscript and this was a big learning experience to us. Sincere heartfelt thanks for your tremendous encouragement, efforts and critical insight into our submission (especially on improving Figures/Images and Movie) which helped us to significantly improve our presentation. We sincerely thank Esteemed Reviewers for their invaluable time, efforts and critical comments and are indebted to them. We are grateful to EGU and Annales Geophysicae for giving us opportunity to publish our work.

As per your invaluable suggestion, we have marked wave features in Supplement Movie using line and pattern used in concerned Figures.

With sincere thanks & regards … Navin
